

Mini Golf Course Tiles - Documentation

Welcome to the Mini Golf Course Tiles! Thank you for purchasing this asset for your Unity projects.

This asset pack is designed to provide you with everything you need to quickly and easily build beautiful, fully functional golf course game levels.

Key Features

Fully Customizable Textures

This asset is highly customizable. You can easily swap and apply different textures to the tiles to create unique environments, such as:

- Lush green summer courses
- Arcade-style mini-golf

All materials are properly structured so you can simply drag, drop, and tweak your preferred textures onto the material slots to achieve the exact look you want.

Easy & Fast Level Design

The tiles are designed with a modular, grid-based approach. They snap together seamlessly, making it incredibly easy and intuitive to construct complex golf game level designs in minutes.

Whether you are building a straightforward putting green, a crazy mini-golf obstacle course, or a massive 18-hole fairway, the modular pieces fit perfectly together, allowing you to focus on the fun part: designing the levels.

Quick Start Guide

1. Import the Package: Drag and drop the asset package into your Unity project or import it via the Package Manager.
2. Enable Snapping: For the best experience, rely on Unity's Vertex Snapping (hold `V` while dragging) or Grid Snapping.
3. Build Your Course: Drag prefabs from the `Prefabs` folder into your scene and connect them to form your course layout.
4. Customize Textures: To change how a tile looks, go to its `MeshRenderer` component, find the assigned Material, and swap the texture with any custom texture of your choice.

Enjoy building your golf game!
